Cornerstone Dental — September 2026 Digital Advertising Summary

Reporting period: 30-Day Update (September)

> **About this report:** This is a 30-day update covering Cornerstone's new and improved search advertising setup. The campaigns were rebuilt from the ground up to work hand in hand with the new website. Each ad now leads to the matching section of the new site, and every call, booking and form is tracked from the first click. Because the setup is new, this report sets the baseline rather than comparing against earlier months. Month-over-month comparisons start with the next report.

A Fresh Setup, Built Around the New Website

The search ads now run as three focused campaigns: **Core Services** (general, preventive and family dentistry), **Emergency** and **Specialty**. They replace the older lineup of one campaign per service. Fewer, tighter groups let the wording of each ad match what a person actually searched for, and each one sends visitors to the page on the new website that answers that search. Fall timing helps too. Once school routines settle, families tend to book the cleanings and checkups that slipped during the summer.

The First 30 Days at a Glance

- Ad impressions (times the ads were shown): **11,823**
- Clicks to the website: **681**, a **5.76%** click-through rate
- Market share: **29.4%**, meaning the ads appeared in roughly three of every ten eligible local searches
- Ads shown in the top positions on the page: **71.8%** of the time

- Patient actions traced to the ads: **46** (13 calls placed straight from the ad, 22 taps on the phone number by ad visitors, 8 online-booking clicks and 3 form requests)
- Website visitors from the ads: **419**, staying an average of 2 minutes 9 seconds

What Stands Out

The ads are earning clicks at a strong rate. Click-through rate is the share of people who see an ad and then click it. At 5.76%, the new campaigns are earning a healthy rate for dental search advertising, which is the clearest early sign that the ads match what local patients are looking for.

Emergency and specialty searches respond best. The Emergency campaign earned a **10.77%** click-through rate and showed near the top of the page 83% of the time. Specialty did even better at **13.95%**, and Cornerstone appeared in about 59% of the eligible specialty searches. People searching for these services usually know what they need, so they tend to be close to booking.

Ad visitors are reading, not bouncing. About two-thirds of ad visits (65.7%) counted as engaged, meaning they lasted more than a few seconds or included more than one page or action. The average ad visit ran just over two minutes. The new site is giving visitors a reason to look around.

How the Three Campaigns Performed

- **Core Services** carried most of the volume: 10,554 impressions and 532 clicks at a 5.04% click-through rate, with a 28.6% market share.
- **Emergency**: 882 impressions and 95 clicks at 10.77%, with a 31.1% market share.
- **Specialty**: smaller by design at 387 impressions and 54 clicks, but the highest click-through rate (13.95%) and the strongest market share (59.3%).

Calls, Bookings and Requests from the Website

Looking at the whole website, including ad visitors, Google search, people who typed the address in directly and other sources, visitors tapped a Cornerstone phone number **105 times**, clicked to book online **21 times** and sent **21 form requests**. Unpaid Google search drove the most call taps (59). The ads followed with 22, on top of the 13 calls placed straight from the ads themselves without a website visit.

The main **Book Now** page is where decisions get made. It drew 143 views and produced 16 call taps, 15 online-booking clicks and 11 form requests, the most of any page on the site. The home page generated 36 call taps and the contact page 8.

Location Interest

Each of the three offices has its own page and its own booking page, so we can now see which locations visitors are looking at. The table shows page views for each and the calls, bookings and requests that started on those pages:

OFFICE	LOCATION PAGE	BOOKING PAGE	ACTIONS
Cornerstone Dental Arts	82	43	8
Fort Sanders West	58	18	8
Executive Park	45	19	5

Cornerstone Dental Arts drew the most location interest, with 82 location-page views and 43 booking-page views. Fort Sanders West matched it on actions (8 apiece) despite fewer visits. Executive Park produced 5 actions from 45 location-page views and 19 booking-page views. Most visitors still reach out from the general pages (home, Book Now, contact), so these office-level figures are a partial view. As the new tracking matures, we'll be able to tie more calls to a specific office.

Services Visitors Explored

Preventive and general dentistry was the most-viewed service area by a wide margin (225 views), followed by emergency dental care (86), restorative dentistry (49), sedation dentistry (44), surgical dentistry (36), cosmetic dentistry (28) and orthodontics (26). TMJ care drew more interest than its size would suggest: the TMJ evaluation and treatment pages had 62 combined views, and visitors spent more than four minutes on average with the TMJ questionnaire, which produced 4 form requests. That's an audience worth watching.

Visitors also spent real time getting to know the practice. The team page was the second most-visited page on the site (495 views), and individual doctor pages each drew roughly 20 to 60 views. Patients who look up their dentist before calling are usually well along in choosing a practice.

Audience and Geography

Knoxville led ad visitors with 113, followed by Farragut (16), Lenoir City (13), Oak Ridge (10), and Karns and Maryville (6 each). The audience spread evenly across age groups. The 25-34 and 45-54 groups were tied for the largest share (21.7% each), with 35-44 and 55-64 close behind. That's a healthy mix for a practice serving patients at every stage of life.

Overall Website Traffic

Across all sources, the website welcomed 2,155 visitors over 2,619 visits and 4,924 page views. Visitors arriving from unpaid Google search were the most engaged, averaging well over a minute per visit, and ad visitors were close behind. Both are good signs that the new site is holding attention.

Looking Ahead

The first 30 days set a solid baseline: strong click-through rates, steady top-of-page placement and a clear flow of calls and bookings from the new site. From here we'll shift budget toward whichever campaign produces the most patient contacts, keep emergency visibility high heading into the busy late-fall stretch, and build out office-level reporting so each location's results are easier to see. The next report will add month-over-month comparisons against this baseline.
