Elliott's Boots & Shoes — September 2026 Digital Advertising Summary

Reporting period: September 1 – September 30, 2026

Holding Steady Into Fall

September was a month of consistency. After four months of gradual gains, the program held its ground: reach, clicks and store-directed activity all landed within about 2% of August's levels. Elliott's stayed in front of **143,368 people** with **540,034 ad impressions** (the number of times an ad appeared), and that exposure produced **4,993 clicks** and **1,231 store-directed actions**, meaning phone calls and requests for driving directions to a store. That's in line with August's 1,243 and well ahead of the roughly 1,050 recorded in May.

An Unseasonably Warm Start to Fall

September usually marks the turn toward fall footwear: work-boot replacement picks up, and shoppers begin thinking about cooler-weather western and casual styles. This year the weather didn't cooperate. Knoxville averaged nearly six degrees above its usual September temperature, and summer conditions lingered into what is normally the changeover.

When it still feels like summer, many shoppers put off buying fall and winter footwear. A flat month in that setting is a solid result. It means the audience built over the summer stayed engaged and is in place for the shopping that typically follows once temperatures drop.

Reach at a Glance

- Total ad impressions: **540,034**, compared with 544,928 in August
- People reached: **143,368**, the number of different individuals who saw an Elliott's ad (August: 143,987)

- Average frequency: **3.77 times per person**, right in the range that builds familiarity without wearing out the message
- Total clicks: **4,993** at a 0.92% blended click-through rate
- Store-directed actions: **1,231**, made up of 505 phone calls and 726 direction requests
- Website sessions from ads: **4,336**

Every headline measure stayed within a narrow band of the prior month. Reach, the number of people seeing the brand, moved less than half a percent, which shows the audience Elliott's has been building is holding together month to month.

What Each Channel Did

Google Search: still the most responsive channel. Search ads appeared 45,583 times and drew 1,768 clicks at a **3.88% click-through rate**, more than four times the blended average. These are people actively typing in what they want, such as "work boots," "western boots" or a store name plus a town, so a much larger share of them click through.

Google Performance Max & Maps: where shoppers find the nearest store. This channel produced 287,184 impressions and 2,078 clicks at 0.72% across Google's Search, Maps, YouTube and display placements. Maps continues to do the most practical work, putting the closest Elliott's location, its hours and a directions button in front of people searching for a boot store nearby. It accounts for most of the month's 726 direction requests.

Facebook & Instagram: keeping the name familiar. Social ads delivered 207,267 impressions and 1,147 clicks at a 0.55% click-through rate. This channel reaches people before they're actively shopping, so when the need for new boots comes up, Elliott's is already a name they recognize.

The Eight Markets

Every store market stayed fully covered in September, with exposure weighted toward the largest opportunities:

- **Knoxville:** 107,035 impressions, again the lead market
- **Hixson (Chattanooga):** 81,543
- **Alcoa:** 74,612
- **Cleveland:** 65,044
- **Morristown:** 63,478
- **Farragut:** 54,896

- **Madison (Nashville metro):** 48,595
- **Dalton, GA:** 44,831

The balance between markets was nearly identical to August. Farragut and Cleveland held essentially level, and no market moved by more than about 2%. Location-specific targeting remains in place, so each shopper sees the store closest to them.

Audience Profile

The audience mix was unchanged at **54.1% men and 45.9% women**, reflecting both sides of the business: the work and safety footwear core, and the ongoing push into women's styles. By age, 35–44 remained the largest group at 26.3%, followed by 45–54 (23.2%), 25–34 (20.2%) and 55–64 (16.9%). That keeps the advertising concentrated on people in their prime working and buying years.

Women's Footwear

The dedicated women's campaigns reached **43,587 women** in September, close to August's 44,112 and up from 40,742 in June. Creative continued across women's western, casual, lifestyle and outdoor footwear. After three months of growth, that audience has settled at a larger base, which gives Elliott's a bigger group of women already familiar with its selection heading into the fall and holiday shopping season.

Calls, Directions and Visits

The measures closest to the sales floor held steady:

- Direction requests: **726**, people who tapped for driving directions to a store (August: 731)
- Phone calls: **505**, click-to-call from ads and Google listings (August: 512)
- Store-locator views on the website: **2,061** (August: 2,094)
- Estimated store visits: **86** (August: 87)

About store visits: this is Google's modeled estimate rather than a hard count. It uses aggregated location data to approximate how many people who saw or clicked an ad later walked into a store, so treat it as a sign of foot-traffic direction rather than an exact tally.

Into October

September held the line during a warm start to the season. With the summer's audience intact, the program enters October well positioned for the fall buying that cooler weather brings: work-boot replacement, western and casual styles, and early holiday shopping.

The plan stays focused: maintain coverage across all eight markets, keep creative centered on work-boot replacement, western and casual footwear and the women's selection, and continue to judge results by calls, direction requests and store-locator activity alongside overall reach.
