

Elliott's Boots & Shoes — July 2026 Digital Advertising Summary

Reporting period: July 1 – July 31, 2026

Where the Program Stands

Three months in, the pattern is established and compounding. July extended the shift that began in June — holding a broad reach across all eight markets while pushing a larger share of that attention toward actions that point at a store: phone calls, direction requests, and visits. Every headline measure moved up, and store-directed activity grew slightly faster than raw exposure, which is the direction you want as an audience matures.

Across the month, the program put Elliott's in front of **140,275 people** and delivered **530,615 ad impressions** — the number of times an ad appeared — reaching each person an average of **3.78 times**. That activity produced **4,944 clicks** and **1,208 store-directed actions** — up from 1,146 in June and roughly 1,050 in May.

The July Setting

July is the heart of the summer footwear season. Work boots move steadily as construction, manufacturing, and agriculture run at full pace through the long daylight months, and the western and casual categories stay in season for fairs, festivals, and weekend wear. It is also the last stretch before back-to-school and fall work-boot replacement cycles begin — making it a useful window to build familiarity in advance of the busier months ahead.

Reach and Frequency

- **Total ad impressions: 530,615** — up from 504,387 in June
- **People reached: 140,275** — up from 133,468, the count of distinct individuals who saw the brand

- **Average frequency: 3.78 times per person** — steady with June, the repetition level that builds recall without wearing an audience out
- **Total clicks: 4,944** at a **0.93%** blended click-through rate
- **Store-directed actions: 1,208** — 497 phone calls and 711 direction requests
- **Website sessions from ads: 4,256**

Reach grew about 5% while store-directed actions grew about 5.4% — a small gap, but it means each additional person reached is producing marginally more real-world action than the month before. That's familiarity doing its work.

Channel Performance

Facebook & Instagram — the audience builder. Meta delivered **202,595 impressions** to **77,197 people** at an average frequency of 2.60, generating 1,139 clicks at a 0.56% click-through rate. This is the channel doing the introducing — putting the Elliott's name, the store locations, and the breadth of the selection in front of people who weren't looking for boots at that moment. Women's-focused creative again outperformed general awareness messaging.

Google Performance Max & Maps — the intent catcher. Performance Max produced **283,033 impressions** and **2,052 clicks** at 0.73%, spread across Search, Maps, YouTube, Discover, and display placements. Its Maps footprint remains the single biggest contributor to real-world action: when someone searched "boot store near me" or "work boots," Elliott's surfaced with the nearest location, hours, and a directions button — which is where the bulk of the month's 711 direction requests originated.

Google Search — the sharpest channel. The targeted search campaigns delivered **44,987 impressions** and **1,753 clicks** at a **3.90% click-through rate**. That rate is more than four times the blended average, and the reason is intent: these were people actively typing "work boots," "western boots," and store-plus-location searches. Fewer impressions, far more of them acted on. Branded terms continued to keep Elliott's owning its own name in results.

Market-by-Market Exposure

All eight store markets stayed covered, weighted toward the highest-opportunity areas:

- **Knoxville:** 105,973 impressions — the flagship market
- **Hixson (Chattanooga):** 79,996
- **Alcoa:** 73,702 — Blount County safety and industrial demand
- **Cleveland:** 63,916 — manufacturing corridor

- **Morristown:** 62,311
- **Farragut:** 53,485 — West Knox and Turkey Creek
- **Madison (Nashville metro):** 47,629
- **Dalton, GA:** 43,603 — Northwest Georgia corridor

Knoxville, Alcoa, and Hixson again accounted for the largest share of calls and direction requests. Because several of these markets sit within an hour of one another, location-specific targeting stayed in place so shoppers consistently saw the store closest to them rather than a generic message.

The Audience

The people reached split **54.3% men** and **45.7% women** — a balance that reflects both halves of the business, with the male-leaning safety and work core offset by the deliberate women's-category push. By age, the audience sat squarely in the working and buying years: **35–44** led at 26.2%, followed by **45–54** at 23.3%, **25–34** at 20.1%, and **55–64** at 17.0%. That distribution is close to ideal for a footwear retailer selling both occupational and lifestyle categories.

Women's Category Update

Growing the women's customer base remains a stated priority, and July continued the trend. The dedicated women's campaigns reached roughly **42,983 women** across western, casual, lifestyle, and outdoor footwear — up from about 40,742 in June and 38,600 in May. Three consecutive months of growth in that audience, paired with engagement rates that keep running ahead of general awareness creative, points to real under-served demand for Elliott's women's selection across these markets rather than a one-month reading.

Turning Exposure Into Store Traffic

The measures that connect advertising to the sales floor all advanced:

- **Direction requests:** 711 — people who tapped for driving directions to a store (June: 674)
- **Phone calls:** 497 — click-to-call from ads and Google listings (June: 472)
- **Store-locator views on the website:** 2,037 (June: 1,936)
- **Estimated store visits:** 85 (June: 81)
- **Website sessions from ads:** 4,256 (June: 4,038)

A note on store visits: that figure is a Google-modeled estimate rather than a hard count — it uses aggregated location signals to approximate how many people saw or clicked an ad and later walked

into a store. Treat it as a directional indicator of foot traffic rather than a precise tally.

Looking Forward

July did what a third month should do: no dramatic swings, steady growth in every direction, and a slow tilt from awareness toward action. The audience now knows the name, which is what makes the next phase possible — August and September bring back-to-school shopping and the start of the fall work-boot replacement cycle, the strongest natural demand window of the year for this category. The plan is to carry the current reach into that window while continuing to shift emphasis toward the calls, directions, and visits that put customers through the door.
