

Elliott's Boots & Shoes — May 2026 Digital Advertising Summary

Reporting period: May 1 – May 31, 2026

Executive Overview

The first months of a new advertising program are about one thing: getting Elliott's in front of the right people, in the right markets, enough times to be remembered. Before chasing clicks and store visits, the work this phase did was build **presence** — showing up consistently when someone across the eight markets was thinking about boots, work footwear, or a gift for someone who needed them.

In May, the program put Elliott's in front of **129,742 people** across the Knoxville, Chattanooga, Morristown, Cleveland, and surrounding markets. It delivered **489,791 ad impressions** and reached each person an average of **3.8 times** over the month. That repetition is the point — a single ad is forgotten, but a brand seen four or five times becomes the one a customer thinks of when they need steel-toes by Friday or a pair of western boots before the weekend. Alongside that exposure, the ads drove **4,548 clicks** to the site and store listings and produced **1,050 store-directed actions** (phone calls and direction requests) even in this awareness-first phase.

The May Setup

May was a strong, naturally busy stretch for footwear. Warm weather pulled outdoor, casual, and western styles into season, graduation and event shopping picked up, and — most importantly for Elliott's — the safety-footwear core held steady as job sites and industrial work continued into the summer build season. It was a productive month to be building an audience across both the work-boot foundation and the growing women's and casual categories.

The plan deliberately led with awareness. Rather than pushing hard for immediate online sales or retargeting people who hadn't met the brand yet, the month concentrated on **reach and frequency** — assembling the audience now so the conversion-focused work that follows has a warm, familiar audience to act on.

Reach & Exposure at a Glance

- **Total ad impressions: 489,791** — the number of times an Elliott's ad was shown across Google and social
- **People reached: 129,742** — the actual count of different individuals who saw the brand at least once
- **Average frequency: 3.8 times per person** — how often, on average, each person saw Elliott's over the month
- **Total clicks: 4,548** at a 0.93% blended click-through rate
- **Store-directed actions: 1,050** — phone calls (438) plus direction requests (612)

Think of impressions as the number of times your billboard was seen, reach as the number of different drivers who passed it, and frequency as how many times each driver saw it on their commute. In a launch month, all three moving up together is exactly the goal — and they did.

How the Channels Performed

Facebook & Instagram — the brand-building engine. Meta carried the audience-building load: **187,432 impressions** reaching **71,208 people** an average of 2.6 times each, generating 1,041 clicks (0.56% click-through). Store-and-product imagery and short-form video ran from each location's own page, with dedicated creative aimed at growing the women's customer base across western, casual, outdoor, and seasonal styles. The frequency here is what turns a first impression into recognition.

Google Performance Max & Maps — the always-on visibility layer. Performance Max delivered **261,094 impressions** and 1,883 clicks across Search, Maps, YouTube, and display, keeping Elliott's present wherever people browsed. The standout was the **Maps presence**: when someone searched "boot store near me" or "work boots," Elliott's surfaced as a featured location with address, hours, and directions — driving the bulk of the month's 612 direction requests and 438 calls, and an estimated **73 store visits** attributed by Google even this early in the program.

Google Search — high-intent visibility. The targeted search campaigns earned **41,265 impressions** and 1,624 clicks at a strong **3.94% click-through rate** — far above the display average, because these were people actively searching "steel toe boots [city]," "western boots Knoxville," and "women's boots near me." The brand-defense terms also kept Elliott's owning its own name in search results.

Where the Exposure Landed

All eight stores were covered, with the heaviest weight on the five priority markets. Impressions by location:

- **Knoxville:** 98,142 — the flagship market and largest share
- **Hixson (Chattanooga):** 73,981 — large metro population base
- **Alcoa:** 68,294 — strong Blount County industrial and safety demand
- **Cleveland:** 59,107 — manufacturing corridor
- **Morristown:** 57,860 — industrial base, lighter local competition
- **Farragut:** 49,338 — West Knox / Turkey Creek, managed to avoid overlap with Knoxville
- **Madison (Nashville metro):** 44,026
- **Dalton, GA:** 39,043 — Northwest Georgia manufacturing corridor

Knoxville, Alcoa, and Hixson led on store-directed actions as well, together accounting for more than half of the month's calls and direction requests. Because Knoxville, Farragut, and Alcoa sit close together, the campaigns used location-specific targeting so a shopper saw the store nearest them rather than a generic ad — keeping the budget from competing against itself.

Who We Reached

The audience reflected both pillars of the business. Men made up **54.7%** of the people reached and women **45.3%** — a healthy balance that shows the women's-growth campaigns pulling their weight against the male-leaning safety core. By age, the heart of the audience sat in the prime working-and-buying years: 35–44 was the largest group at 26.4%, followed by 45–54 (23.1%) and 25–34 (19.8%), with 55–64 at 17.2%, 18–24 at 7.9%, and 65+ at 5.6%.

The Women's-Growth Picture

Growing the women's customer base is a stated priority, and the dedicated women's campaigns reached roughly **38,600 women** across western, casual, outdoor, and seasonal footwear in May. Those campaigns earned a higher engagement rate on social than the general store ads — a useful early signal that there's real, under-served demand for Elliott's women's selection in these markets. This is the audience the next phase is built to convert.

Store-Directed Activity

Even though the month was weighted toward awareness, it still produced concrete, store-pointed actions:

- **Direction requests:** 612 — people who tapped for driving directions to a store
- **Phone calls:** 438 — click-to-call from ads and the Google listings
- **Store-locator views on the site:** 1,847
- **Estimated store visits (Google):** 73 — people who saw or clicked an ad and then physically visited a store
- **Website sessions from ads:** 3,914

The Bottom Line

May did the job this phase was designed to do: it built Elliott's into a recognized name across all eight markets, reaching nearly 130,000 people almost four times each, while still producing real store-directed activity along the way. That audience — and the women's-category momentum within it — is the foundation the next phase builds on, when the emphasis shifts toward store visits, calls, and directions at higher volume. Reporting will deepen alongside that shift, breaking out store visits and calls by location and tracking the women's category as it grows.
