

Elliott's Boots & Shoes — August 2026 Digital Advertising Summary

Reporting period: August 1 – August 31, 2026

Four Months In

Four months in, the pattern remains steady and continues to build. August extended the shift that began in June — maintaining broad reach across all eight markets while continuing to move a slightly larger share of that attention toward actions that point at a store: phone calls, direction requests, and visits. The month brought another measured increase across the headline metrics, with store-directed activity edging ahead of overall exposure as the audience continued to mature.

Across the month, the program put Elliott's in front of **143,987 people** and delivered **544,928 ad impressions** — the number of times an ad appeared — reaching each person an average of **3.78 times**. That activity produced **5,083 clicks** and **1,243 store-directed actions** — up from 1,208 in July and roughly 1,050 in May.

The August Setting

August sits at the transition point between the heart of summer footwear season and the beginning of the fall buying cycle. Work boots continue to move steadily as construction, manufacturing, and agriculture remain active, while western and casual categories benefit from fairs, festivals, and late-summer weekend wear. At the same time, back-to-school shopping and the early fall work-boot replacement cycle begin bringing more shoppers into the market.

It is therefore a useful month for carrying the familiarity built through the summer into the higher-intent period ahead.

How Far the Advertising Traveled

- **Total ad impressions:** 544,928 — up from 530,615 in July

- **People reached:** 143,987 — up from 140,275, the count of distinct individuals who saw the brand
- **Average frequency:** 3.78 times per person — essentially steady with July, maintaining the repetition level that builds recall without materially increasing audience fatigue
- **Total clicks:** 5,083 at a 0.93% blended click-through rate
- **Store-directed actions:** 1,243 — 512 phone calls and 731 direction requests
- **Website sessions from ads:** 4,372

Reach grew about 2.6% while store-directed actions grew about 2.9% — a small but useful gap, continuing the pattern of store-directed activity growing slightly faster than raw exposure. The program is maintaining broad awareness while gradually producing more measurable actions from the people it reaches.

Channel Performance

Facebook & Instagram — the audience builder. Meta delivered 208,271 impressions to 79,106 people at an average frequency of 2.63, generating 1,168 clicks at a 0.56% click-through rate. This remained the channel doing the introducing — putting the Elliott's name, store locations, and breadth of selection in front of people who were not necessarily shopping for boots at that exact moment. Women's-focused creative continued to provide a useful counterbalance to general awareness messaging.

Google Performance Max & Maps — the intent catcher. Performance Max produced 290,996 impressions and 2,113 clicks at 0.73%, spread across Search, Maps, YouTube, Discover, and display placements. Its Maps footprint remained the single biggest contributor to real-world action: when someone searched "boot store near me" or "work boots," Elliott's surfaced with the nearest location, hours, and a directions button — continuing to generate the bulk of the month's 731 direction requests.

Google Search — the sharpest channel. The targeted search campaigns delivered 45,661 impressions and 1,802 clicks at a 3.95% click-through rate. That rate remained more than four times the blended average, reflecting the difference in intent: these were people actively typing "work boots," "western boots," and store-plus-location searches. Fewer impressions, but a substantially higher proportion of those impressions produced clicks. Branded terms continued to keep Elliott's visible for shoppers specifically searching for the company.

Coverage Across the Eight Markets

All eight store markets stayed covered, weighted toward the highest-opportunity areas:

- **Knoxville:** 108,412 impressions — the flagship market

- **Hixson (Chattanooga):** 82,151
- **Alcoa:** 75,764 — Blount County safety and industrial demand
- **Cleveland:** 65,187 — manufacturing corridor
- **Morristown:** 63,784
- **Farragut:** 54,923 — West Knox and Turkey Creek
- **Madison (Nashville metro):** 49,031
- **Dalton, GA:** 45,676 — Northwest Georgia corridor

Knoxville, Alcoa, and Hixson again accounted for the largest share of calls and direction requests. Because several of these markets sit within an hour of one another, location-specific targeting stayed in place so shoppers consistently saw the store closest to them rather than a generic message.

Who Was Reached

The people reached remained close to the previous month's balance at **54.1% men and 45.9% women** — continuing to reflect both halves of the business, with the male-leaning safety and work core offset by the deliberate women's-category push.

By age, the audience remained concentrated in the working and buying years: 35–44 led at 26.3%, followed by 45–54 at 23.2%, 25–34 at 20.2%, and 55–64 at 16.9%. The distribution remained broadly consistent with July, indicating that the additional reach came without a meaningful shift away from the core customer age groups.

Women's Category Update

Growing the women's customer base remains a stated priority, and August continued the gradual trend established through the summer. The dedicated women's campaigns reached roughly **44,112 women** across western, casual, lifestyle, and outdoor footwear — up from about 42,983 in July and 40,742 in June.

The audience has now expanded for a third consecutive month, while engagement continues to provide a useful counterbalance to general awareness creative. The continued increase gives Elliott's a larger pool of women who have been exposed to the brand and its women's selection as the fall footwear season approaches.

From Awareness to the Sales Floor

The measures that connect advertising to the sales floor all advanced modestly:

- **Direction requests:** 731 — people who tapped for driving directions to a store (July: 711)
- **Phone calls:** 512 — click-to-call from ads and Google listings (July: 497)
- **Store-locator views on the website:** 2,094 (July: 2,037)
- **Estimated store visits:** 87 (July: 85)
- **Website sessions from ads:** 4,372 (July: 4,256)

A note on store visits: that figure is a Google-modeled estimate rather than a hard count — it uses aggregated location signals to approximate how many people saw or clicked an ad and later walked into a store. Treat it as a directional indicator of foot traffic rather than a precise tally.

What September Brings

August continued what the program established in July: no dramatic swings, steady growth across the major measures, and a gradual tilt from awareness toward action. The audience continues to build familiarity with Elliott's, which creates a stronger foundation for the higher-intent fall period.

September brings the beginning of the fall work-boot replacement cycle and continued back-to-school and seasonal footwear demand. The plan is to carry the current reach into that window while continuing to emphasize the actions most closely connected to the sales floor — calls, directions, store-locator activity, and visits.

The goal remains consistent: maintain broad market coverage while allowing the growing audience to produce incrementally more store-directed activity without requiring a disproportionate increase in overall exposure.
