Cornerstone Dental — September 2026 Digital Advertising Summary

Reporting period: September 1 – September 30, 2026

A New Campaign Structure Goes Live

September marked a fresh start for Cornerstone's search advertising. The campaign was rebuilt around three focused groups, **Core Services**, **Emergency** and **Specialty**, in place of the older lineup of service-by-service campaigns. Each group now sends visitors to the matching section of the refreshed website. The new structure went live in mid-September, so this report covers roughly the second half of the month. Fall is a good moment for it: once school schedules settle, families turn back to the cleanings and checkups that slipped during the summer.

September at a Glance

- Ad impressions (the number of times the ads were shown): **4,766**
- Clicks: **269**, a **5.64%** click-through rate
- Market share: **25.33%**, meaning the ads appeared in about one of every four eligible local searches
- Ads shown in the top positions on the page: **70.8%** of the time
- Tracked phone calls from ads: **25**
- Phone clicks from ads: **20**
- Website visitors from the ads: **162**, staying an average of 1 minute 47 seconds

Early Results Worth Noting

People are clicking at a higher rate. Click-through rate is the share of people who see an ad and then click it. At 5.64%, the new campaigns are running well above the 3% to 4% range the account has typically held, and above the average for dental search advertising. Tighter ad groups mean the

wording of each ad matches what the person searched for more closely, and that's usually what moves this number.

Emergency care is a standout. The Emergency campaign earned an **8.31%** click-through rate and appeared in more than a third of eligible emergency-dental searches (35.61% market share), showing near the top of the page 84% of the time. Someone searching for an emergency dentist is usually ready to call right away, so this is some of the most valuable traffic the practice can buy.

Phone activity followed quickly. In about two weeks the campaigns produced 25 tracked calls from the ads plus 20 taps on the phone number from ad visitors on the website. That's 45 phone touches, and it's the clearest sign the new structure is reaching patients who want to book.

How the Three Campaigns Performed

- **Core Services** (general, preventive and family dentistry) carried most of the volume: 4,247 impressions and 224 clicks at a 5.27% click-through rate, with a 24.38% market share.
- **Emergency**: 397 impressions and 33 clicks at 8.31%, with the strongest page placement of the three.
- **Specialty**: smaller by design at 122 impressions and 12 clicks, but the highest click-through rate at 9.84% and a 61.33% market share. When someone searches for these specific services, Cornerstone shows up most of the time.

What Visitors Looked At

Ad visitors landed mostly on the preventive and general dentistry pages (68 visitors), followed by the team page (24) and the emergency dental services page (17). Interest in the team page is a good sign. Patients who look up who they'll be seeing before they call tend to be further along in choosing a practice. Visitors stayed an average of 1 minute 47 seconds, and about 62% of visits counted as engaged, which means they lasted more than a few seconds or included more than one page or action.

Audience and Geography

Knoxville led ad visitors with 45, followed by Lenoir City (8) and Farragut (5). Visitors spread fairly evenly across age groups, with 25-34 the largest at 21 visitors, followed closely by 45-54 (19) and 35-44 (16). That's a healthy spread for a family practice serving patients at every stage of life.

Overall Website Activity

Across all sources (ads, Google search, direct visits and referrals), the website welcomed 969 visitors over 1,131 visits in September. Visitors averaged 1 minute 49 seconds on the site, which shows people are taking time to read about services and the team rather than leaving right away.

Looking Ahead

The first two weeks of the new structure point in the right direction: higher click-through rates, strong placement for emergency searches and a quick start on phone calls. October will be the first full month on the new campaigns, giving us a complete read and a clean baseline for month-over-month comparison going forward. From there we'll tune budgets toward whichever of the three groups produces the most calls, and keep emergency visibility high as we move into the busy late-fall period before the holidays.
