GUARDIAN FOUNDATION REPAIR

September 2026 — Digital Advertising Report

Google Search Advertising — Relaunch on the New Website

Period: September 1 – September 30, 2026 (ads live September 22–30)

Reporting date: October 15, 2026 **Prepared by:** Dickson Media & Events

September was a **relaunch month**. The rebuilt Google Search program went live on **September 22**. It now sends homeowners to the new **guardianfoundationrepair.com** website and its dedicated landing pages for foundation repair, drainage and crawl-space work. This report covers those first nine days. October will be the first full month on the new program.

In nine days the ads produced **5 tracked lead actions**: three estimate-request forms, one phone call from an ad that lasted **more than six minutes**, and one call placed from the website after an ad click. For a program still in its first week of learning, that's a solid opening read.

1. Executive Summary

TRACKED LEAD ACTIONS
5
Forms, calls & website calls · 9 days live

IMPRESSIONS
1,598
Times the ads were shown

CLICKS
64
Visits to the website from the ads

CLICK-THROUGH RATE
4.0%
Strong for home-services search

ORGANIC SEARCH VISITS
218
New website · 68% engaged

> **Reading this month correctly:** nine days of delivery is a launch window, not a full month, so we have deliberately left out month-over-month comparisons. Google's bidding system also spends its first one to two weeks learning which searches, times and devices lead to calls. The figures below show how the program started, and October will provide the first clean baseline.

2. Lead Activity

SOURCE	COUNT	NOTES
Estimate-request forms from ad visitors	3	Homeowners who clicked an ad and submitted the estimate form on the new site.
Calls from Google Ads	1	Placed directly from the ad. The conversation ran just over six minutes, a substantive discussion rather than a quick question.
Call clicks from the website	1	Visitor clicked an ad, landed on the site, then tapped the phone number.
Total tracked lead actions	**5**	**September 22–30**

Forms led this first week, which is common right after a website launch: the new landing pages put the estimate form front and center. As the program settles, we expect phone calls to make up a growing share of activity, as they have historically for foundation-repair searches.

3. Campaign Performance

CAMPAIGN	IMPR.	CLICKS	CTR	LEAD ACTIONS	SEARCH SHARE
Water + Crawl Space	799	33	4.13%	3	32.3%
Foundation Repair	770	25	3.25%	1	58.4%
Branded (Guardian name)	29	6	20.69%	1	81.5%
Total	**1,598**	**64**	**4.00%**	**5**	**—**

Search share is the percentage of eligible searches in which a Guardian ad appeared.

Water + Crawl Space produced the most clicks and lead actions in its first nine days, driven by drainage and crawl-space searches that tend to rise when fall rains return. **Foundation Repair** already appears in more than half of eligible foundation searches (58.4%), a strong starting position for the account's core service. **Branded** protects the Guardian name: when homeowners search for the company directly, the ad showed in 81.5% of those searches and was clicked one time in five.

Device and keyword detail

DEVICE	IMPR.	CLICKS	AD LEADS*
Mobile	1,082	41	2
Desktop	471	21	2
Tablet	45	2	0

**Forms and calls from ads. The one call placed from the website is tracked separately and not broken out by device.*

Mobile carried about two-thirds of the activity, which is typical for homeowners who spot a crack or a wet crawl space and search right away. Desktop matched mobile on leads with half the clicks, which suggests homeowners doing more deliberate research before they reach out. On the keyword side, **exact-match** terms (the most specific searches) clicked at 8.8% versus 3.5% for broader phrase-match terms. That's the same pattern the program has shown before, and it tells us where to concentrate bids as the account matures.

4. The New Website at Work

The new site gives the ads purpose-built landing pages, one for each type of problem a homeowner might be searching about. In September the most-visited of these were the **Knoxville drainage**, **Knoxville foundation repair** and **crawl-space encapsulation** pages, which together matched the three campaign themes closely.

Outside the paid program, the site is also starting to earn **organic search** traffic, meaning visitors who found Guardian through regular Google results rather than an ad. September brought 218 organic search visits with a **68% engagement rate**, meaning most of those visitors read further or took an action rather than leaving immediately. That's an encouraging early sign for a site that launched at the end of August.

5. Seasonal Backdrop

Fall is an important stretch for foundation and water-management work in East Tennessee. Returning rain after the summer brings drainage and crawl-space moisture problems back into view, and homeowners who noticed cracks or sticking doors over the summer often want them addressed before winter. Freeze-thaw cycles can make existing problems worse. That timing works in the program's favor going into October and November.

6. Looking Ahead

October will be the program's first full month on the new website, giving a complete picture of call and form volume and a clean baseline for comparisons going forward. Over the next few weeks we will:

- Review the search terms that triggered the ads and add exclusions for anything off-target
- Shift budget toward the exact-match terms and campaigns producing lead actions
- Build on Foundation Repair's strong search share while widening Water + Crawl Space's reach
