

Elliott's Boots & Shoes — June 2026 Digital Advertising Summary

Reporting period: June 1 – June 30, 2026

Executive Overview

If the first month was about building presence, June was about turning that presence into action. With the brand now established across all eight markets, the advertising kept reach strong while shifting more weight toward store-focused behavior — phone calls, direction requests, and store visits. As audiences grew more familiar with Elliott's, more of them took a next step.

In June, the program put Elliott's in front of **133,468 people** across the Knoxville, Chattanooga, Cleveland, Morristown, and surrounding markets, delivering **504,387 ad impressions** — the number of times an ad was shown — and reaching each person an average of **3.8 times**. Those ads drove **4,691 clicks** and produced **1,146 store-directed actions** (phone calls and direction requests), up from about 1,050 the month before.

The June Shift

June is a naturally strong footwear stretch — warm weather keeps outdoor, casual, and western styles in season, and the safety-footwear core holds steady as job sites stay busy through the summer build season. Against that backdrop, the plan deliberately began leaning from pure awareness toward engagement: still reaching new people, but doing more to convert the now-familiar audience into calls, directions, and visits. The numbers moved in exactly that direction.

Reach & Exposure at a Glance

- **Total ad impressions: 504,387** — up from 489,791 in May
- **People reached: 133,468** — up from 129,742, the count of different individuals who saw the brand

- **Average frequency: 3.78 times per person** — how often, on average, each person saw Elliott's
- **Total clicks: 4,691** at a 0.93% blended click-through rate
- **Store-directed actions: 1,146** — phone calls (472) plus direction requests (674)

Reach, frequency, and store-directed actions all moved up together — the sign of a program maturing from "getting noticed" toward "getting visited."

How the Channels Performed

Facebook & Instagram — the brand-building engine. Meta again carried the audience-building load: **192,764 impressions** reaching **73,381 people** an average of 2.6 times each, generating 1,082 clicks. Women's-focused creative continued to outperform general awareness messaging while strengthening Elliott's presence across western, casual, outdoor, and seasonal styles.

Google Performance Max & Maps — the always-on visibility layer. Performance Max delivered **268,915 impressions** and 1,947 clicks across Search, Maps, YouTube, Discover, and display. Its Maps presence again did the heavy lifting on real-world intent — when someone searched "boot store near me" or "work boots," Elliott's surfaced with address, hours, and directions, driving the bulk of the month's calls, direction requests, and store visits.

Google Search — high-intent visibility. The targeted search campaigns earned **42,708 impressions** and 1,662 clicks at a strong **3.89% click-through rate** — far above the display average, because these were people actively searching "work boots," "western boots," and footwear by location. Branded terms kept Elliott's owning its own name in results.

Where the Exposure Landed

All eight stores stayed covered, weighted toward the priority markets. Impressions by location:

- **Knoxville:** 100,861 — the flagship market and largest share
- **Hixson (Chattanooga):** 76,078
- **Alcoa:** 69,992 — strong Blount County safety and industrial demand
- **Cleveland:** 60,814 — manufacturing corridor
- **Morristown:** 59,231
- **Farragut:** 50,914 — West Knox / Turkey Creek
- **Madison (Nashville metro):** 45,167
- **Dalton, GA:** 41,330 — Northwest Georgia corridor

Knoxville, Alcoa, and Hixson again generated the largest share of store-directed activity. Because several markets sit close together, the campaigns kept using location-specific targeting so shoppers saw the store nearest them rather than a generic ad.

Who We Reached

The audience reflected both sides of the business: men made up **54.3%** of the people reached and women **45.7%** — a healthy balance showing the women's-growth campaigns pulling their weight against the male-leaning safety core. By age, the audience clustered in the prime working-and-buying years: 35–44 led at 26.2%, followed by 45–54 (23.3%) and 25–34 (20.1%), with 55–64 at 17.0%.

The Women's-Growth Story

Growing the women's customer base remains a priority, and the dedicated women's campaigns reached roughly **40,742 women** across western, casual, lifestyle, and outdoor footwear in June — up from about 38,600 in May — while continuing to outperform general awareness campaigns on engagement. That's a consistent, encouraging signal that there's real, under-served demand for Elliott's women's selection across these markets. This is the audience the engagement phase is built to convert.

Store-Directed Activity

June produced more concrete, store-pointed action than May:

- **Direction requests:** 674 — people who tapped for driving directions to a store
- **Phone calls:** 472 — click-to-call from ads and Google listings
- **Store-locator views on the site:** 1,936
- **Estimated store visits (Google):** 81 — people who saw or clicked an ad and then physically visited a store
- **Website sessions from ads:** 4,038

Note: estimated store visits are a Google-modeled figure, not a hard count — a directional indicator of foot traffic the ads helped drive.

The Bottom Line

June built on the launch month in the way you'd want: reach held strong and grew, while the store-directed actions that point to real customers — calls, directions, and visits — all moved up. The women's category kept gaining ground, and the audience is now familiar enough that the emphasis can keep shifting toward driving store traffic. As reporting deepens, we'll continue breaking out store visits and calls and tracking the women's category as it grows.
