

Elliott's Boots & Shoes — Monthly Performance Report (May 2026)

Reporting period: May 1 – May 31, 2026 · [Sample](#) / [Projected Report](#)

About this report: This is a sample report that illustrates what your monthly recap will look like. The figures shown are **projections** for an early-stage (months 1–2) launch focused on building exposure, reach, and frequency across all eight stores — based on retail-footwear industry benchmarks, not live campaign data. Real reporting begins once campaigns are live, and the numbers will be replaced with your actual results.

Executive Overview

The first two months of any new advertising program are about one thing: getting Elliott's in front of the right people, in the right markets, as many times as it takes to be remembered. Before chasing clicks and store visits, the priority is **presence** — showing up consistently when someone in your eight markets is thinking about boots, work footwear, or a gift for someone who is. This sample report shows what that looks like in numbers.

In a representative early month, the program is projected to put Elliott's in front of roughly **130,000 people** across the Knoxville, Chattanooga, Morristown, Cleveland, and surrounding markets, delivering about **half a million ad impressions** and reaching each person an average of **three or more times** over the month. That repetition is the point: a single ad is forgotten, but a brand seen three, four, five times becomes the one a customer thinks of when they need steel-toes by Friday or a pair of western boots before the weekend.

The May Setup

May is a strong, naturally busy stretch for footwear. Warm weather pulls outdoor, casual, and western styles into season, graduation and event shopping picks up, and — most importantly for Elliott's —

the safety-footwear core stays steady year-round as job sites and industrial work continue through the summer build season. It is a sensible month to launch into: enough seasonal energy to build an audience quickly, across both the work-boot foundation and the growing women's and casual categories.

This phase deliberately leads with awareness. Rather than pushing hard for immediate online sales or running retargeting to people who haven't met the brand yet, months one and two concentrate the effort on **reach and frequency** — assembling the audience now so that the conversion-focused work in the months that follow has a warm, familiar audience to convert.

Reach & Exposure at a Glance

- **Total ad impressions: ~500,000** — the number of times an Elliott's ad was shown across Google and social platforms
- **People reached: ~130,000 unique individuals** — the actual count of different people who saw the brand at least once
- **Average frequency: ~3.3 times per person** — how often, on average, each person saw Elliott's over the month (the repetition that builds recall)
- **Social reach (Facebook & Instagram): ~70,000 people** at roughly 2.6 views each — the primary engine for brand-building and reaching women
- **Google impressions: ~315,000** across Search, Maps, YouTube, and the display network — keeping Elliott's visible at the moment people search and browse

Think of impressions as the number of times your billboard was seen, reach as the number of different drivers who passed it, and frequency as how many times each driver saw it on their commute. For a launch phase, all three moving up together is exactly the goal.

Where the Exposure Landed

All eight stores are covered, with the heaviest weight on the five priority markets. Projected impressions by location for a representative month:

- **Knoxville: ~100,000** — the flagship market and largest share
- **Hixson (Chattanooga): ~75,000** — large metro population base
- **Alcoa: ~70,000** — strong Blount County industrial/safety demand
- **Cleveland: ~60,000** — manufacturing corridor
- **Morristown: ~60,000** — industrial base, lighter local competition
- **Farragut: ~50,000** — West Knox / Turkey Creek, managed to avoid overlap with Knoxville

- **Madison (Nashville metro):** ~45,000
- **Dalton, GA:** ~40,000 — Northwest Georgia manufacturing corridor

Because Knoxville, Farragut, and Alcoa sit close together, the campaigns use location-specific targeting so a shopper sees the store nearest them rather than a generic ad — keeping the budget from competing against itself.

How the Channels Delivered

Facebook & Instagram (the brand-building engine). Projected at roughly 185,000 impressions reaching about 70,000 people. This is where the audience gets built — store-and-product imagery and short-form video served from each location's own page, with dedicated creative aimed at growing the women's customer base across western, casual, outdoor, and seasonal styles. Frequency here (~2.6x) is what turns a first impression into recognition.

Google Performance Max & Maps (the always-on visibility layer). The bulk of the ~315,000 Google impressions, keeping Elliott's present across Search, Maps, YouTube, and display. The standout in this phase is the **Maps presence** — when someone searches "boot store near me" or "work boots," Elliott's appears as a featured location with address, hours, and directions, projected to drive on the order of 100–150 direction and call actions in a month even before the program leans into conversion.

Google Search (high-intent visibility). A focused presence on the searches that signal someone is ready to buy — "steel toe boots [city]," "western boots Knoxville," "women's boots near me." In this exposure phase the goal is simply to be seen on those results pages and to own the Elliott's brand name; the projected ~1,200 clicks are a secondary read, with the heavier click-and-visit emphasis coming in later phases.

Who We Reached

The projected audience reflects both pillars of the business. The safety-and-work core skews male and spans the 25–64 working-age range, while the dedicated women's campaigns broaden the reach toward female shoppers across western, casual, and outdoor styles — a blended split in the neighborhood of 55% men and 45% women. That women's share is a deliberate growth target: a segment Elliott's is positioned to win and one this phase is specifically building an audience around.

What This Phase Is Built to Do

Months one and two are the foundation. By concentrating on reach and frequency now — getting Elliott's in front of ~130,000 people several times each — the program assembles a warm, brand-aware audience across all eight markets. The conversion-focused work that follows (heavier search

capture, store-visit optimization, and retargeting to the audience built here) then has a receptive audience to act on, rather than starting cold. In short: this phase earns the attention; the next phase converts it.

Looking Ahead

As the campaigns move past the initial launch window, reporting shifts to add the metrics that matter most to your stores — projected store visits, phone calls and direction requests by location, and the women's-category momentum — alongside the reach and frequency shown here. Each month's report will also carry a clear read on which markets are performing strongest and where to shift weight next. This sample is the shape of that recap; the numbers become yours the moment the campaigns go live.
