

June 2026 — Digital Advertising Report

Search Engine Advertising + Retargeting — Second Full Month

Period: June 1 – June 30, 2026

Reporting date: July 8, 2026

Prepared by: Dickson Media & Events

June is the program's **second full calendar month** of delivery — the core Google Search campaigns running at full pace, and the three retargeting layers that launched mid-May now logging their first complete month. The pattern that mattered most in May held again in June: **qualified phone calls and conversion rate grew faster than raw traffic.**

Impressions rose about 3% and clicks about 4% versus May — but phone-call leads climbed from 23 to **29 (+26%)** and the conversion rate improved from 9.2% to **11.1%**. The extra value is coming from *better-qualified* volume, exactly the behavior we expect as Google's bidding accumulates real call data and tilts delivery toward the auctions most likely to produce a phone call.

June delivered **29 verifiable phone-call leads through Google Search**, plus 26 secondary touchpoints (17 phone calls dialed from the website after an ad click, and 9 form submissions) — 55 tracked search interactions in all. The retargeting layers added another 5 phone-call leads and 6 form fills across their first full month. **Google Search remains the core lead engine**; the retargeting channels exist to keep Guardian in front of the audience Search surfaces during the days-long consideration window before a homeowner calls.

1. Executive Summary

KPIs below reflect the **core Google Search program**, for clean month-over-month comparison against May. The retargeting channels are reported separately in Section 6.

PHONE-CALL LEADS

29

▲ +26.1% vs May (23) · 60s+ qualified

LONG-DURATION CALLS
(90S+)

21

▲ +23.5% vs May (17)

PHONE SHARE

84%

All phone actions ÷ all tracked leads

IMPRESSIONS

32,417

▲ +2.9% vs May (31,505)

CLICKS

261

▲ +4.0% vs May · CTR 0.81%

CONV. RATE

11.1%

▲ from 9.2% in May (+1.9 pts)

Headline: the gap we most want to see this early widened again — calls up 26% against clicks up only 4%. The spend is buying more *qualified* calls, not just more traffic. We continue to expect a compounding increase in phone-call volume through the summer as the bidding matures and the retargeting layers fill out against a growing audience.

2. Conversion Performance

SOURCE	COUNT	NOTES
Calls from Google Ads (primary — 60s+ qualified)	29	The primary conversion metric. Up from 23 in May (+26%). Call from a user who clicked a Google ad and stayed on the line past the 60-second qualifying threshold.
Calls from Google Ads — long-duration subset (90s+)	21	Subset of the above (up from 17). Calls lasting 90+ seconds — a strong indicator the conversation went beyond initial qualifying questions.
Call clicks from website (secondary)	17	User clicked a Google ad, landed on the site, then dialed the number on the page. Tracked as a secondary action.
Form submissions (secondary)	9	Email-form leads. Treated as secondary per program design — this lead type converts to booked appointments at a lower rate than phone calls.
Total tracked interactions (Search)	55	29 primary phone-call leads + 26 secondary touchpoints. Retargeting leads reported separately in Section 6.

The twenty-nine primary phone-call leads are the metric we treat as the most reliable indicator of program health, and the 90-second subset (21 of 29) confirms these are substantive conversations rather than quick hang-ups. As the campaigns accumulate more of these call-conversion data points, Google's algorithm increasingly favors the keywords, ad-copy, and audience signals producing them — the compounding effect behind June's outsized lead lift.

3. Campaign Performance

CAMPAIGN	IMPR.	CLICKS	CTR	CONV.	CONV. RATE
SRCH — Foundation Repair	18,913	114	0.60%	14	12.3%
SRCH — Water + Crawl	12,781	96	0.75%	12	12.5%
SRCH — Branded	723	51	7.05%	3	5.9%
Total	32,417	261	0.81%	29	11.1%

Conversion counts reflect **primary phone-call leads only**. The 17 website call clicks and 9 form submissions are tracked but not counted in the primary totals, per the program's primary-vs-secondary design.

- **Foundation Repair** (14 phone-call leads / 12.3% conv rate, up from 11 / 10.0% in May). The largest campaign and again the biggest absolute gainer — the raised-bid, higher-intent ad groups continued to convert as Google's bidding leaned into the terms already producing calls.
- **Water + Crawl** (12 leads / 12.5%, up from 9 / 9.8%). Strongest conversion efficiency in the program again. The spring-into-summer moisture-demand window is doing exactly what was projected — basement waterproofing and crawl-space encapsulation continue to carry this campaign.
- **Branded** (3 leads / 5.9%). Defending the Guardian name efficiently. Branded search volume ticked up — consistent with the Meta prospecting campaign putting the name in front of more Knox-metro homeowners.

Device performance

DEVICE	IMPR.	CLICKS	CONV.
Mobile	21,584	169	20
Desktop	9,948	83	9
Tablet	885	9	0
Total	32,417	261	29

Mobile drove 20 of the 29 primary phone-call leads — the same dominant pattern as May, at higher volume. Foundation-repair searches tend to happen the moment someone spots a visible problem, and the immediate response is a call, which favors phone over forms. The mobile bid boost stays in place.

4. Keyword Match-Type Performance

MATCH TYPE	IMPR.	CLICKS	CTR	CONV.	CONV. RATE
EXACT	10,037	104	1.04%	21	20.2%
PHRASE	22,380	157	0.70%	8	5.1%
Total	32,417	261	0.81%	29	11.1%

Pattern holding: exact-match keywords (specific service queries like "foundation repair knoxville") carried the higher conversion rate again — 21 of the month's 29 primary calls, at a 20.2% conversion rate. Phrase-match earns its place by catching real-world variants ("near me," "contractor") and converts lighter per click (5.1%) but broadens reach. Bidding continued to lean toward the exact terms already producing calls.

5. Weather & Demand Backdrop

Foundation and crawl-space demand tracks the ground itself — and June's ground conditions in East Tennessee were unusually active. The region spent spring 2026 in a **severe-to-extreme drought** — its driest start to a year since 2007 — which shrinks the area's clay-heavy soils and pulls them away from foundations. Then **June flipped wet**, finishing above normal with two flash-flood events (June 8 and June 27–28) that re-saturated that hardened ground in a matter of hours. By early July, Knox County had returned to drought-free.

Why it matters: a rapid drought-to-rain swing is precisely the condition that stresses foundations — soils shrink when dry, then swell and heave as they rewet, and downpours overwhelm crawl spaces and basements faster than baked ground can absorb them. That makes summer 2026 a timely moment for Knoxville homeowners to check for new cracks, sticking doors, and crawl-space moisture — a favorable demand backdrop for the program heading into July.

6. Retargeting Layers — First Full Month

The three channels that launched mid-May logged their first complete month in June. They exist to recapture and amplify the audience Google Search already produces — judged on different metrics than Search, as noted on each card. **Google Search remains the core lead engine.**

RETARGETING

Google Demand Gen — Remarketing

What it does: shows Guardian cards on YouTube, Gmail, and Discover to people who already viewed a service, contact, or financing page — keeping Guardian visible through the consideration window.

June result: 5 phone-call leads + 2 form fills. As expected for a warm audience, it converts well above first-time Search traffic.

RETARGETING

Meta (Facebook + Instagram) — Remarketing

What it does: reaches the same site-visitor audience in the Facebook/Instagram feed — catching people during everyday browsing when they aren't on Google.

June result: 4 form fills, plus an unmeasured "halo" of office calls that began from a Meta touch.

AWARENESS / FEEDER

Meta — Cold Prospecting (Feeder)

What it does: puts the Guardian name in front of Knox-metro homeowners who haven't visited the site yet. Its job is to feed the remarketing audience, not to generate immediate leads.

June result: added roughly **814 engaged visitors** to the remarketing pool — judged by audience build and downstream lift, not direct leads.

Combined June lead picture

CHANNEL	PHONE-CALL LEADS	FORM FILLS	ROLE
Google Search (core)	29	9	Primary lead engine — highest intent, highest converting.
Google Demand Gen remarketing	5	2	Re-engages signal-rich site visitors on Google surfaces.
Meta remarketing	—	4	Same audience via FB/IG feed; + unmeasured call halo.
Meta cold prospecting	—	—	Feeder — added ~814 new remarketing-pool visitors.
Total tracked leads (June)	34	15	Phone calls remain the dominant, most-valued lead type.

7. Google Business Profile — Organic Context

Separate from the paid program, Guardian's **Google Business Profile** — the free listing that appears in Google Maps and local search — continued to build. Its calls have trended steadily upward month over month since February, and June's direction requests and profile interactions held near their recent highs. This is organic visibility, distinct from the paid call totals above, but it's a healthy complementary signal: as the paid program raises Guardian's presence in the market, more people are also finding and contacting the business directly through its Google listing.

8. July Outlook

The plan for July is consolidation — let the structure built across May and June mature. On the core Search side, Foundation Repair and Water + Crawl continue accumulating the call-conversion history that lets Google's bidding get progressively more efficient. The retargeting layers get their second full month against a remarketing pool the feeder keeps growing, which is where the compounding "60–90 day" lift begins to show most clearly. With the summer demand backdrop favorable, the expectation is continued, steady growth in qualified phone-call volume.

On track: May scaled the core and lifted lead quality faster than traffic; June extended that gain and gave the retargeting engine its first full month. Each month's data makes the next month's bidding smarter — the compounding lift we projected is materializing as expected.
